No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                     | SIDSI/godata/geneseq/geneseqn-embl/NA1980.DAT:*

P-PSDB; AAW87761

Nucleic acids and chimeric genes for increasing seed lysine content - comprise sequence encoding all or part of lysine ketoglutarate reductase, useful to improve nutritional quality of seeds from transformed plants

Claim 3; Page 184-186; 231pp; English

This is the nucleotide sequence of a near full-length CDNA encoding maize lysine ketoglutarate reductase (LKR, see AAW87761), or maize lysine ketoglutarate reductase (LKR, see AAW87761), or accharopine dehydrogenase (SDH). It was obtained by PCR accharopine developing seed cDNA using primers (see AAV99560-61) based on Arabidopsis LKR/SDH sequences, and by RACE. Isolated based on Arabidopsis LKR/SDH sequences, and by RACE. Isolated comprising sequences encoding all or part of plant incleic acids comprising sequences encoding all or part of plant certament (or a subfragment) operably linked to a seed specific requilator, where the chimeric gene reduces LKR activity in plant seeds transformed with it; (2) plant cells and seeds in which LKR second with the chimeric gene; (3) a nucleic acid fragment comprising; (1) chimeric gene above, and (i1) a second chimeric gene, or operably linked to a plant chloroplast transit sequence and to a operably linked to a plant chloroplast transit sequence and to a plant seed-specific regulatory sequence; (4) plants comprising in plant seed-specific regulatory sequence; (4) plants comprising in counciling free lysine accumulation in plant seeds. Item activity, sequence of LKR activity, sequence of LKR activity, reduction may be achieved by cloning the claimed confinence gene some communication in plant seeds. Item activity reduction may be achieved by cloning the claimed confinence gene for cosuppression of LKR, the chimeric gene for Expension of LKR, and transforming plants with the chimeric gene for Expension of LKR, and transforming plants with the chimeric gene for Expension of LKR, and transforming plants with the chimeric gene RKR.

Nucleic acids and chimeric genes for increasing seed lysine content comprise sequence encoding all or part of lysine ketoglutarate reductase, useful to improve nutritional quality of seeds from transformed plants Lysine ketoglutarate reductase; saccharopine dehydrogenase; transgenic plant; seed; soybean; ss. Soybean lysine ketoglutarate reductase cDNA BP. AAV99562 standard; cDNA to mRNA; 2582 Epelbaum SU, Falco SC, McDevitt RE; Location/Qualifiers 3..2357 DUPO) DU PONT DE NEMOURS & CO 98WO-US06051 97US-0824627 (first entry) WPI; 1999-045139/04. P-PSDB; AAW87760. 27-MAR-1998; 27-MAR-1997; WO9842831-A2 29-MAR-1999 Glycine max. 01-OCT-1998 AAV99562; CDS Key AAV99562 RESULT

Claim 3; Page 182-184; 231pp; English.

This is the nucleotide sequence of a near full-length cDNA encoding coopbean lysine ketoglutarate reductase (LKR, see AAN87760), or saccharopine dehydrogenase (SDH). It was obtained by PCR saccharopine dehydrogenase (SDH). It was obtained by PCR saccharopine developing seed cDNA using primers (see AAV99560-61) absed on Arabidopsis LKR/SDH sequences, and by RACE. Isolated nucleic acids comprising sequences, and by RACE. Isolated nucleic acids comprising sequences encoding all or part of plant crit ragment (or a subfragment) operably linked to a seed specific requilator, where the chimeric gene reduces LKR activity in plant crit regulator, where the chimeric gene reduces LKR activity in plant crit seeds transformed with it; (2) plant cells and seeds in which LKR seeds transformation with the chimeric gene; (3) a nucleic acid fragment encoding dihydrodipicolinic acid crin sortivity is reduced to a nucleic acid fragment encoding dihydrodipicolinic acid in which a nucleic acid fragment encoding dihydrodipicolinic acid synthase (DHDPS) substantially insensitive to lysine inhibition is operably linked to a plant chloroplast transit sequence and to a plant seder-specific regulatory sequence; (4) plants comprising in and (ii), especially as fragment of (2); and (5) seeds from (3). The chimeric genes can be used to produce plant cells from (3). The chimeric genes can be used to produce plant cells important in controlling free lysine accumulation in plant seeds. Important in controlling free lysine accumulation in plant seeds. Important preparing a chimeric gene. CCC conny supparent preparing a chimeric gene. CCC conny coupean, preparing a chimeric gene. CCCC conny conny plants with the chimeric gene.

acid fragments comprising sequences encoding all or part of plant in KRs are new. Also claimed are: (1) a chimeric gene comprising the fragment (or a subfragment) operably linked to a seed specific requiator. Where the chimeric gene reduces LKR activity in plant seeds transformed with it; (2) plant cells and seeds in which LKR seeds transformed with it; (2) plant cells and seeds in which LKR cartivity is reduced due to a mutation in the gene encoding LKR or transformation with the chimeric gene; (3) a nucleic acid fragment comprising; (1) chimeric gene above, and (ii) a second chimeric gene, comprising; (1) chimeric gene above, and (ii) a second chimeric gene, in which a nucleic acid fragment encoding dibydrocalpicolinic acid synthase (PhDPS) substantially insensitive to lysine inhibition is synthase (PhDPS) substantially insensitive to lysine inhibition is synthase (plant seed-specific regulatory sequence; (4) plants comprising in plant seed-specific regulatory sequence; (4) plants comprising in a seeds with reduced LKR activity, especially in Arabidopsis, and seeds with reduced LKR activity, especially in Arabidopsis, corn, soybean, rapeseed, wheat and rice (claimed). LKR is important in controlling free lysine accumulation in plant seeds. Fragment, preparing a chimeric gene accumulation in plant seeds. Fragment, preparing a chimeric gene (or cosuppression of LKR, che chimeric gene.) Che chimeric gene.

```

This nucleotide sequence of a coding region for an Arabidopsis that an a polypeptide (see AAW87766) comprising the saccharopine dehydrogenase (SDH) domain of the lysine ketoglutarate reductase, SDH protein. Isolated nucleic acid fragments comprising sequences SDH protein. Isolated nucleic acid fragment scomprising sequences claimed are: (1) a chimeric gene comprising the fragment (or a claimed are: (1) a chimeric gene comprising the fragment (or a cubfragment) operably linked to a suitable seed specific regulator, where the chimeric gene reduces LKR activity in plant seeds which LKR transformed with the (2) plant cells and seeds in which LKR crivity is reduced due to a mutation in the gene encoding LKR or activity is reduced due to a mutation in the gene encoding LKR or crivity is reduced due to a mutation in the gene encoding LKR or crivity is reduced due to a mutation in the gene encoding LKR or crivity is reducing fragment encoding dihydrodipicolinic acid in which a nucleic acid fragment encoding dihydrodipicolinic acid synthase (DHDPS) substantially insensitive to lysine inhibition is synthase (DHDPS) substantially insensitive to lysine inhibition is coperably linked to a plant chloroplast transit sequence and to a coperably linked to a plant chloroplast transit sequence and (1) and (11), especially as fragment of (2); and (5); and (6) seeds on the reduced LKR activity, especially in Arabidopsis, and seeds with reduced LKR activity, especially in Arabidopsis, important in controlling are lysine accumulation in plant seither in preparting a chimeric gene for cosuppression of LKR. expression of antisense RNA for LKR, and transforming plants with the chimeric gene.

dehydrogenase (SDH) polypeptide (see AAW87765). It was isolated from an expressed sequence tag database by comparison to an arabidopsis LMR/SDH protein (see AAW87769). Isolated nucleic acid fragments comprising sequences encoding all or part of plant cand fragments comprising sequences encoding all or part of plant LMRs are new. Also claimed are: (1) a chimeric gene comprising the fragment (or a subfragment) persably linked to a seed specific regulator, where the chimeric gene reduces LMR activity in plant seeds transformed with it; (2) plant cells and seeds in which LMR seeds transformed with the chimeric gene; (3) a nucleic acid fragment comprising; (i) chimeric gene above, and (ii) a second chimeric gene, operably linked to a plant chloroplast transit sequence and to a synthase (DHDPS) substantially insensitive to lysine inhibition is synthase (DHDPS) substantially insensitive to lysine inhibition is coperably linked to a plant chloroplast transit sequence and to a genome (i) and (ii), especially as fragment of (2); and (5) seeds transit reduced LMR activity, especially in Arabidopsis, corn, soybean, rapeseed, wheat and rice (claimed). LMR is corn, soybean, rapeseed, wheat and rice (claimed). LMR is important in controlling free lysine accumulation in plant seeds. If requesting a chimeric gene for cosuppression of LMR. Expression of LMR activity reduction may be achieved by cloning the claimed the chainer of the chainer of the cosuppression of LMR.

                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insectiodes, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ggcaatccgggattgtggctacgagatctcgcttggcatgatgccaagtccattggacc 773

CLEAR/SDH) and peptidyl-alpha-hydroxydytycine alpha-anidating lyase (PAL) including lysine-ketoglutarate reductase/saccharopine dehydrogenase (LKR/SDH) and peptidyl-alpha-hydroxydytycine alpha-anidating lyase (PAL) are norsophila melanogaster, designated dmLKR/SDH, dmPAL and dmPAL2. The enzymes are useful for detecting a candidate compound especially a invertebrate enzyme or its fragment. The identified compound is useful for controlling a pest, by reducing viability of the pest. Insect or invertebrate enzyme activity and for identification and screening of subject protein. Nucleic acids encoding the invertebrate enzymes or their components of a pathway involving a fragments are useful as biopesticides. The enzymes and their DNA are useful for genetically modifying metazoan invertebrate enzymes or their cuseful for genetically modifying metazoan invertebrate enzymes or unsernable. The organisms or cultured cells, resulting in expression of the protein. The organisms or cultured cells are useful in for screening candidate compounds for the ability to modulate expression of consponents of discorders associated with abnormal consyme levels and/or function, e.g. disorders associated with lysine consyme levels and/or function, e.g. disorders associated with lysine contained the catabolism of the principal enzyme in the catabolism of lysine principal enzyme in the catabolism of lysine contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä
